NAME: SAATHVIK SAI SUVARNA
SRN: PES1UG24AM238
SCENARIO – 30
SE LAB – 02

Epic 1: Claim Submission & Validation

Description: Enable passengers to report missing luggage securely using their booking details.

User Story	As a...	I want to...	So that...
Story 1.1: Submit Claim	passenger	submit a lost baggage claim by entering my PNR and Baggage Tag Number	I can report my missing luggage and generate a unique Claim ID
Story 1.2: Validation	system	validate the PNR and Bag Tag against airline records before submission	invalid claims are prevented and users are prompted to re-enter correct details

Epic 2: Baggage Tracing & Recovery

Description: Automate the discovery and tracking process for lost luggage.

User Story	As a...	I want to...	So that...
Story 2.1: Cross-Reference Logs	system	cross-reference passenger lost baggage reports against unrouted luggage scan logs	I can identify matches and speed up luggage recovery
Story 2.2: Manual Status Updates	Baggage Service Agent	manually update the tracking status and current physical location of a bag	there is human oversight and accurate tracking during the physical recovery phase

Epic 3: Passenger Notifications

Description: Keep passengers updated on their claim status to reduce support desk volume.

User Story	As a...	I want to...	So that...
Story 3.1: Real-Time Alerts	passenger	receive real-time SMS and email notifications whenever my luggage tracking status changes	I can stay informed, reducing anxiety and support desk call volume

Epic 4: Compliance & Compensation

Description: Ensure compliance with international aviation passenger rights.

User Story	As a...	I want to...	So that...
Story 4.1: Automated Compensation	passenger	automatically receive a compensation form link via email if my bag is in the "Lost" state for more than 21 consecutive days	I can seamlessly process my compensation claims according to aviation laws

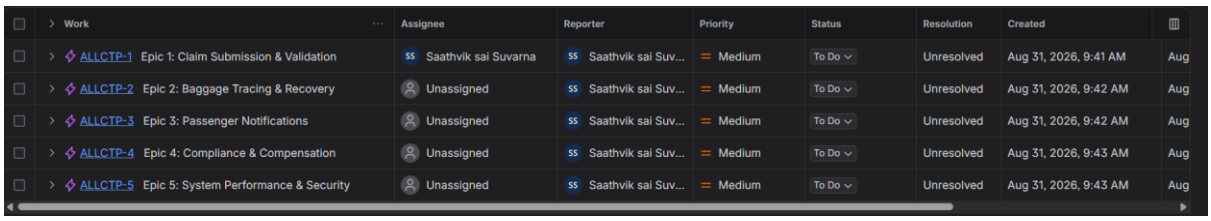

Epic 5: System Performance & Security

Description: Ensure a secure, fast, and responsive user experience.

User Story	As a...	I want to...	So that...
Story 5.1: High-Speed Timeline API	passenger	view my complete multi-leg scan history timeline in under 200 ms	I have a seamless and responsive user experience
Story 5.2: Data Encryption	system administrator	ensure all Passenger Personally Identifiable Information (PII) is encrypted at rest using AES-256	sensitive user data is protected from breaches and complies with global data privacy regulations

Deliverables:

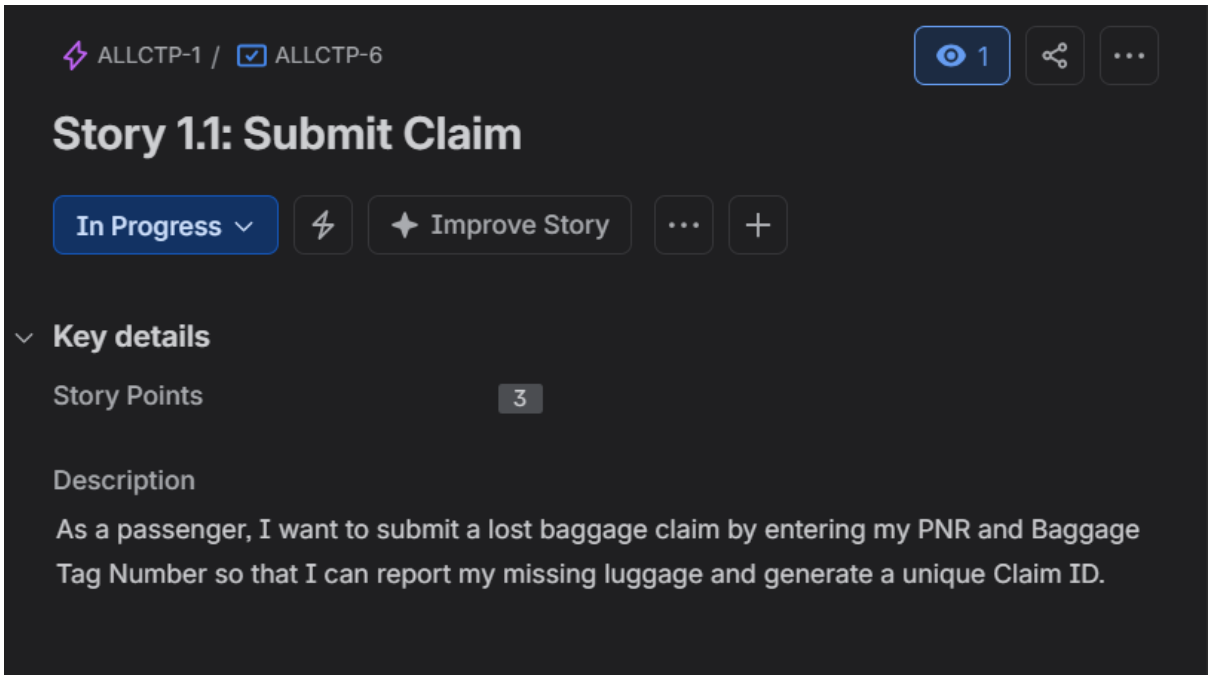

1)EPICS AND STORIES CREATED

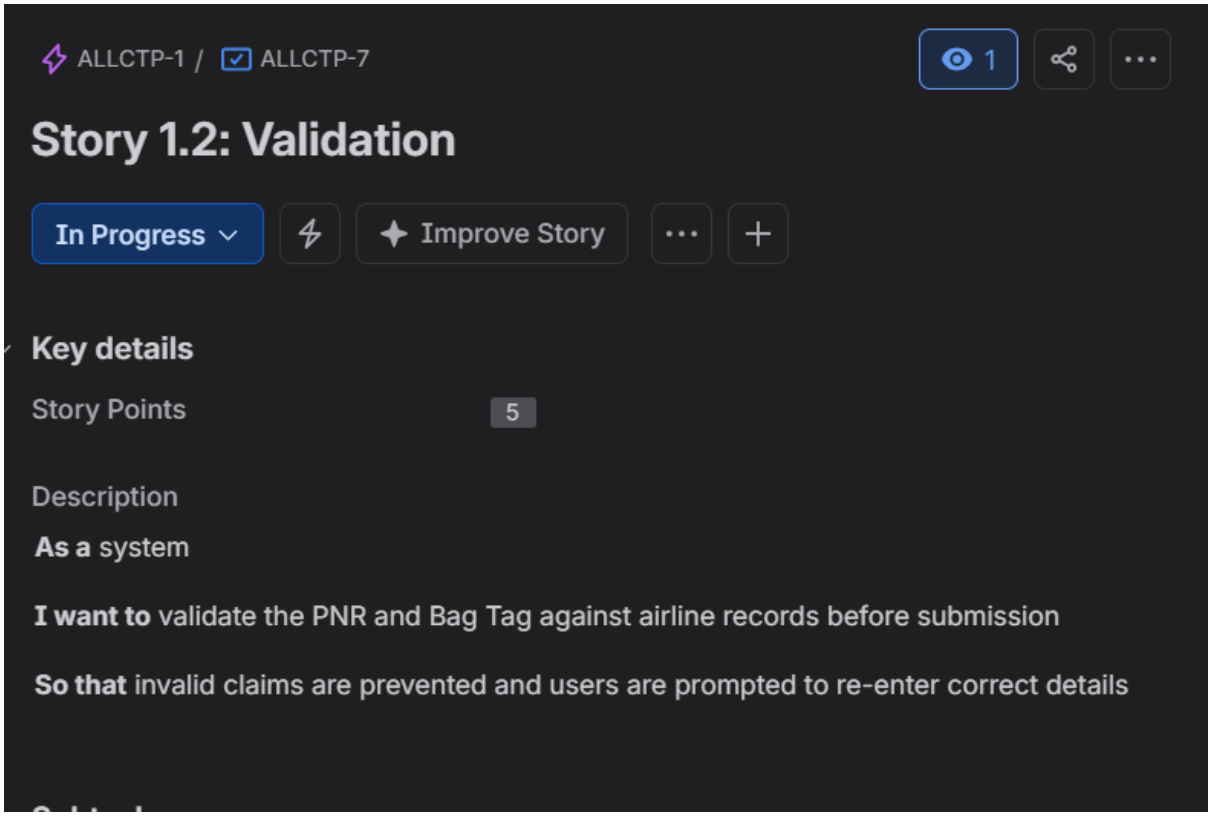

Work	Assignee	Reporter	Priority	Status	Resolution	Created	
ALLCTP-1 Epic 1: Claim Submission & Validation	Saathvik sai Suvarna	Saathvik sai Suv...	Medium	To Do	Unresolved	Aug 31, 2026, 9:41 AM	Aug
ALLCTP-2 Epic 2: Baggage Tracing & Recovery	Unassigned	Saathvik sai Suv...	Medium	To Do	Unresolved	Aug 31, 2026, 9:42 AM	Aug
ALLCTP-3 Epic 3: Passenger Notifications	Unassigned	Saathvik sai Suv...	Medium	To Do	Unresolved	Aug 31, 2026, 9:42 AM	Aug
ALLCTP-4 Epic 4: Compliance & Compensation	Unassigned	Saathvik sai Suv...	Medium	To Do	Unresolved	Aug 31, 2026, 9:43 AM	Aug
ALLCTP-5 Epic 5: System Performance & Security	Unassigned	Saathvik sai Suv...	Medium	To Do	Unresolved	Aug 31, 2026, 9:43 AM	Aug

Epic 2:

Group Reflection: Agile Workflow & Sprint Simulation

"Transitioning the Airport Lost Luggage Claim system from a static requirements document to a dynamic Jira backlog provided valuable insight into Agile methodology. By breaking down high-level Functional Requirements into specific Epics and User Stories, the focus naturally shifted to the end-user's perspective and the direct value each feature provides to the passenger or system administrator.

Simulating the sprint cycle demonstrated how development teams prioritise work and manage complexity. Using the Fibonacci sequence for Story Points was particularly effective, as it forced a realistic evaluation of the effort and uncertainty involved in tasks such as cross-referencing databases versus simple manual status updates. Furthermore, managing the Active Sprints board and generating the Burndown Chart illustrated how crucial visual tracking is for maintaining team alignment, monitoring velocity, and ensuring the project remains on schedule. Ultimately, this lab successfully bridged theoretical software engineering concepts with practical, real-world project management tools."
